Summary

Software Engineer with nearly two years of professional experience in production infrastructure, distributed systems, and reliability engineering. Experienced in developing Kubernetes controllers, building developer tools in Go, optimizing production systems, and operating large-scale services supporting 5.55M monthly active users. Seeking software engineering opportunities involving hands-on development, complex systems, and end-to-end technical ownership.

Technical Skills

Languages: Python, Go, C/C++, OCaml
Systems / Infrastructure: Linux, AWS, Kubernetes, EKS, Terraform, Helm, Ansible
Automation / CI/CD: Jenkins, GitHub Actions, ArgoCD, Docker, Git
Observability: Datadog, CloudWatch, Sumo Logic, Prometheus, Grafana
Reliability Engineering: Incident Response, Root-Cause Analysis, On-Call Operations, Postmortems

Experience

Software Engineer (Infrastructure) Seoul, South Korea
LG Uplus *Jan 2025 – Present*

- Diagnosed and optimized Redis-backed queueing logic by replacing list-based linear searches with sorted-set and binary-search-based processing, reducing Redis CPU usage by approximately 8x and customer queue waiting time by approximately 2x.
- Contributed to the architecture of a Kubernetes-based LLM inference platform for LG Uplus's Modu AI initiative, evaluating AI gateway and model-routing components, vLLM-based serving, hybrid-cloud GPU deployment, and production observability.
- Designed and implemented five reusable Terraform modules to standardize infrastructure provisioning for an on-premises-to-AWS migration program spanning 60+ services in a regulated telecom environment.
- Investigated recurring production failure modes following six postmortems in 2025; strengthened observability and implemented reliability improvements, with no major infrastructure-related incidents since November 2025.
- Executed a zero-downtime AWS account-to-account migration of a production SMS/Email service supporting centralized authentication, using ArgoCD blue/green deployments on EKS with rollback-ready cutover.

Software Engineering Intern (DevOps) Seoul, South Korea
LG Uplus *Jun 2024 – Jul 2024*

- Implemented centralized logging and Sumo Logic integration for an internal developer platform, improving production visibility and reducing support-ticket volume.
- Automated code-quality checks with GitHub Actions and supported the migration of containerized microservices from EC2 to EKS.

Software Development Intern Seongnam-si, South Korea
NAVER Corp *Jun 2023 – Aug 2023*

- Developed a Kubernetes operator in Go to monitor VictoriaMetrics resource utilization and automatically scale workloads based on CPU and memory usage.
- Designed resource-monitoring metrics and scaling thresholds, validated automated scaling behavior through testing, and presented results to engineering leadership.

Projects

unic | *Go, Bubble Tea, Cobra, AWS SDK v2* Feb 2026 – Present

- Architected and developed an open-source AWS management TUI in Go, integrating AWS SDK v2 with Bubble Tea and Cobra to provide interactive cloud resource management workflows.
- Implemented resource inspection and operational troubleshooting workflows across EC2, SSM, RDS, Route53, ECS, EKS, IAM, and CloudWatch.
- Adopted by approximately 20 engineers across multiple teams.

Education

University of Southern California Los Angeles, CA
Bachelor of Science in Computer Science *Aug 2019 – Dec 2024*
